

[illegible]

Figure 1. The effect of the concentration of the *Agrobacterium* suspension on the transformation efficiency of *Agrobacterium* strains. The *Agrobacterium* strains were grown in YEA medium for 24 h at 28 °C. The cell concentration was adjusted to 1.0 × 10⁸ cells/ml. The cell suspension was mixed with the plant tissue and incubated for 24 h at 28 °C. The plant tissue was then cultured on the selective medium. The transformation efficiency was determined as the number of transformants per 100 mg of plant tissue. The data are the mean ± SD of three independent experiments.

The following table shows the results of the regression analysis for the dependent variable *Perceived Organizational Support*. The independent variables are *Organizational Commitment* and *Organizational Identification*. The table includes the unstandardized coefficient (B), the standardized coefficient (Beta), the t-value, and the p-value for each variable.

Variable	B	Beta	t	p
Intercept	1.000		1.000	
Organizational Commitment	0.150	0.150	1.500	0.070
Organizational Identification	0.100	0.100	1.000	0.320

The results indicate that both *Organizational Commitment* and *Organizational Identification* have a positive effect on *Perceived Organizational Support*. The effect of *Organizational Commitment* is statistically significant at the 0.05 level (p = 0.070), while the effect of *Organizational Identification* is not statistically significant (p = 0.320).

1. The first step in the process is to identify the problem. This involves gathering information about the situation and understanding the needs of the stakeholders involved.

2. Once the problem is identified, the next step is to develop a plan. This involves setting goals, identifying resources, and determining the steps that need to be taken to address the problem.

3. The third step is to implement the plan. This involves putting the plan into action and monitoring progress to ensure that the goals are being met.

4. Finally, the fourth step is to evaluate the results. This involves assessing the effectiveness of the plan and making adjustments as needed to improve the outcome.
